

## **Research Methodologies**

Except the technical discoveries/work done by the persons belong to research community, there are lot of things, that bothers them. Other than the technical problem formulation and solution, they face problems like How to start their research, how to judge right direction, how and when start writing their work professionally, how to finish their work and write thesis, how to approach different professors for collaboration or further studies, how to raise funds etc. There are some hot burning topics which we will be covering in a **workshop to be conducted soon**:

### **Some basic Topics may be getting covered:**

1. How to write a good Review/Research Paper
2. How to write a good thesis
3. How to apply for Research Funding's in Govt/Private Agencies - How to write good funding proposal
4. Philosophy of Research (I am interested in one talk by Kannan Sir on this topic)
5. How to manage time in Research Degree - What should be the pace of research
6. How to approach for research internship in Indian/Foreign Universities and Companies
7. Where to publish papers and how to get reviewers' opinions before submitting the paper
8. How to apply for further Research Degrees outside India
9. How to establish research collaboration with researchers in your domain (India/Outside).
